Watertank

Watertank packed include lid, water faucet and gasket and a protective bag.

- Install the faucet before use water tank. Faucet attachment may require a tool.
- Fill the water tank halfway. When water is added, the water is warming up quickly. Excessive filling will strain the structure of the stove.
- The water tank faucet should be installed on either side of the stove, this distributes the weight correctly.
- When using a water tank it heats up an outside, this should be taken into account.

The water tank is connected after the first pipe piece, the Altai heater model needs an adapter to connect the product. Do not use a defective water tank and check the faucet on the regularly.
